

LESS IS MORE!

INLINE: THE ENTIRELY NEW, COMPLETELY FLUSH WOOD-ALUMINIUM WINDOW.

More glass, less frame: With its INLINE product line, GAULHOFER presents a wood-aluminium window that is completely flush inside and outside impressing with state-of-the-art window technology, minimalistic design, clear lines and first-rate thermal insulation.

This earned the astonishingly beautiful INLINE window design a special mention in the category Building & Elements by the German Design Awards 2017's high-ranking expert jury.

GAULHOFER INLINE 91 ADVANTAGES AT A GLANCE.

- Ecologically produced using wood sourced from domestic sustainable forestry, available in spruce, larch and oak
- No PUR foams means these windows are purely natural and have better building physics properties
- Installation depth 91 mm
- Fully concealed fittings
- Convincing insulation values:
from U_w 0.91 to optimum U_w values of $0.68 \text{ W/m}^2\text{K}$
- Standard triple glazing, Thermostop® spacers, optionally with Thermostop®Plus
- The unique GAULHOFER wet sealing provides a hermetically sealed glass joint inside and outside
- GAULHOFER Audiostop® triple sealing system provides protection from noise, cold, wind and rain (included)
- Awarded design:
extra-slim and flush on the inside and outside
- Individual design variety thanks to wide range of colours
- 30-year GAULHOFER warranty*

INLINE 91 SLIM

WOOD-ALUMINIUM

U_w values of 0.91 to 0.68 W/m²K

AWARDED DESIGN

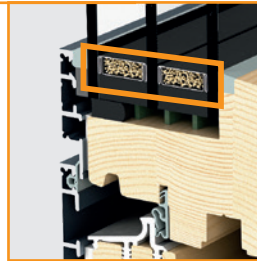

Extra-slim and flush on the inside and outside
With its modern and elegant appearance, the construction simultaneously meets all requirements of modern architecture.

TIGHT

Elaborately press-fitted and deburred by hand at the GAULHOFER factory, GAULHOFER'S wet sealing made from UV-resistant silicone hermetically and durably seals the glass joint. Contrary to conventional dry glazing methods, this provides protection against uncontrolled moisture ingress into the wood.

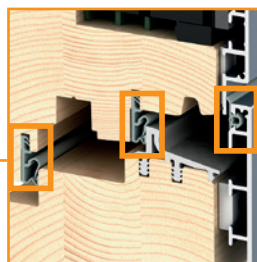

WARM

Triple glazing as standard Thermally optimised **Thermostop®** [standard] or **Thermostop®Plus** [optional] glass spacers improve the glass edge's thermal insulation performance and counteract condensation.

PROTECTED

The exclusive GAULHOFER construction protects and supports the outer pane
The stepless SLIM aluminium shell gives the outside view maximum clarity.

COMFORTABLE.

GAULHOFER's elaborate **Audiostop®** technology employs three circumferential seals. The centre seal is ideally positioned to effectively separate the cold exterior atmosphere from the warm and moist interior atmosphere. This prevents the annoying formation of condensate in the rebate zone.

U values calculated in accordance with EN 10077-1, single-sash window, element size 1230 x 1480 mm, spruce. As per 06/2017 – © GAULHOFER – subject to technical changes, mistakes and printing errors.
