

The UltimateAir® RECOUP AERATOR®

How to Increase Your
Revenues and Protect the
Health of Your Customers

Build a Solid Relationship with Homeowners

To Generate Unit – Installation – and Customer Retention, Service Sales

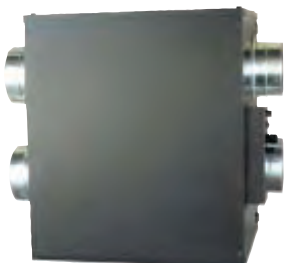

The **UltimateAir RecoupAerator® 200DX** is a Whole-House Ventilation system; and the best, all-year round solution for improving indoor air quality (IAQ) – providing cost effective energy recapture – and helping maintain constant, comfortable humidity levels.

The **RecoupAerator® 200DX** is an E/HRV combining both ERV and HRV technologies, and coupling them with MERV 12 rated filters. The minimum home air filtration recommended by IAQ experts.

UltimateAir® Whole-House Ventilation
The Best Investment for Energy Efficiency, Safety, Comfort, and Health

Today, it's all about saving energy, and adding the **200DX** to your HVAC solution allows homeowners to take advantage of **the lowest electrical footprint** of any whole-house ventilation system.

The **homeowner remains safe and secure**, as the unit allows them to close their windows any time, day or night, and still receive fresh, filtered, healthy air. The unit also includes a standard EconoCool™ feature that works like a whole-house attic fan—only better.

This E/HRV exchanges all the air in a home with fresh, filtered, healthy air every two hours or so, while helping to maintain desired temperature and humidity. No matter what the season, **the home is comfortable, clean, and fresh smelling.**

Without proper ventilation, the home—a personal safe haven—may actually be making homeowners' sick. Air quality, and the harmful substances in the air families breathe often goes unnoticed because air is invisible.

The **200DX** provides both ventilation and filtration—removing the many contaminants created from inside the home and capturing pollens and mold spores, always ensuring **only fresh, healthy air is supplied into the home.**

Contractors Profit by Selling
UltimateAir®'s Benefits
Closing the Sale with Competitive Advantages and Consumer Benefits

Improves Health and Comfort with:

- ❖ MERV 12 filtration - filters pollen, mold spores, dust mites, pet dander and more.
- ❖ Manages both heat and humidity (mitigating mold and mildew)
- ❖ Air flow always automatically balanced
- ❖ Performs quietly and efficiently with brushless motor technology

Allows Complete Control of the Home Environment and Indoor Air Quality with: Optional Features available to customize a system to your customer's exact needs

- ❖ CO2 Guard™ – senses and adjusts for increased levels of CO2 to keep your family and friends safe (Great if you entertain often!)
- ❖ Dual Function Timer – boosts air flow for short periods of time
- ❖ WarmFlo Defrost – pre-heats incoming air
- ❖ Pressure Guard™ – senses and adjusts for changes in indoor air pressure

The only healthy solution for energy efficient homes is the RecoupAerator®

Variable speed control lets you adjust the air flow based on home size and owner preference. Patented EconoCool allows the RecoupAerator to adjust to outside temperatures and bring in cooler outside air at night so you don't have to run your air conditioner constantly.

A washable mesh pre-filter captures larger airborne particles and can be rinsed to clean.

The highest rated quality filter material available in a E/HRV (MERV 12) is easily replaced and captures virtually all airborne particles.

Powder coated steel casing beats the competitor's plastic casing in looks and durability.

The RecoupAerator® is self-balancing and keeps fresh air constantly circulating.

The multiple mounting options of the 200DX provide ease of installation.

Built with EC brushless motors – the most energy efficient maintenance free motors available.

Preferred product of HVAC installers and builders of healthy homes. The RecoupAerator® won multiple design awards.

Saves Money with:

- ❖ 95% heat recovery - highest rating in the industry
- ❖ Lowest electrical footprint
- ❖ Lowest cost-of-ownership
- ❖ EconoCool™ energy saver - reduces dependency on A/C

*Guarantees
Peace of Mind with an
Industry Leading
5-Year Warranty*

"We initially got a **RecoupAerator®** because there was an air quality problem in the house. My daughter Caitlyn, who's only three, developed asthma as a baby. So I called the Ohio Lung Association, who sent me to your site. It's been two months and Caitlyn hasn't had any problems. Actually, all of us are sleeping better. It's as cheap as running a light bulb."

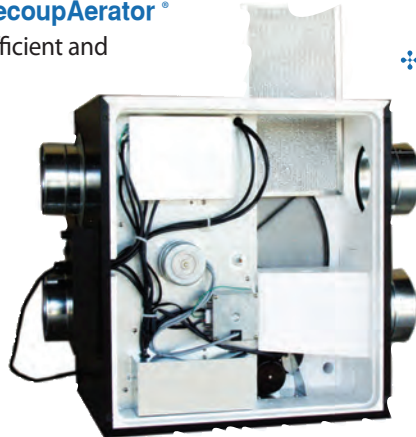

—Dan A, Columbus, OH

Contractors Choose UltimateAir®

The easiest, most fail-safe system to install

Reputations are built on product reliability and customer satisfaction. The **RecoupAerator® 200DX** is the most energy-efficient and most reliable whole house ventilation system on the market today.

The **200DX** is easy to install. Contractors also appreciate the flexibility and reliability of this E/HRV – both features that improve their bottom line.

Saves the Contractor Time and Money

- ✦ No air flow balancing required – automatically adjusts – optimal performance
- ✦ No drainage required
- ✦ Installs vertically or horizontally
- ✦ Air drag created by flex duct is automatically compensated for
- ✦ Fewer callbacks - more satisfied customers - increased profitability

SPECIFICATIONS	MODEL 200DX
Variable air exchange rate	30-200 CFM
Temperature effectiveness at full flow	Up to 96%
Latent Performance Coefficient	Up to 69% [Winter]; 43% [Summer]
Dimensions	25"H x 19"W x 25"D
Unit Weight	72 lbs.
Pre-filter	Washable Aluminum Mesh
Duct Connections	6 inch
Certifications	UL 1812 and independently tested to the Canadian test protocol CSA439
Average electrical consumption	60 CFM - 49W, 97 CFM - 73W, 200 CFM - 260W
Motor	EC Brushless Motors
Electrical	120 VAC / 5 Amp
